

As a salesman and road warrior, I subscribe to XM Satellite Radio for the wide range of music choices and other programing offered. As I travel through a multistate area, I enjoy hearing the traffic and weather reports. While I suppose I could listen to a local station when in the area, I often access the traffic reports before I venture into the metro area as a method of determining which route I will use or whether I need to detour. Also, the weather reports allow me to determine whether I continue on to visit the area or postpone until another time. Please reject the NAB's petition 04-160. I enjoy the commercial free programing offered by XM and pay for that privilege and believe I should have the right to have weather and traffic reports provided.
